

Sites that use or have used the Moodle CodeRunner plugin

The Moodle plugin repository¹ reports that 552 Moodle sites had the CodeRunner plugin installed in September 2018. The specific sites are not listed anywhere and most users of a Moodle plugin do not correspond with the question author. However I have been able to put together the following list of 41 sites, gleaned from postings to the CodeRunner question authors' forum² and developers' forum³ or from users who have corresponded with me directly. There are also a few postings to the forum from Russia, Serbia, India and elsewhere but I can't track down the actual institutions. One site (University of Warwick) is included because there's a mention of CodeRunner on their website. I am providing the list as evidence for the widespread geographic uptake of CodeRunner. Other evidence for this comes from the translations of at least some of the CodeRunner language strings into other languages⁴: Spanish, Swedish, German, Romanian and Greek.

Disclaimer: I don't actually know how much use the different institutions are making of CodeRunner or even if they're still using it.
